ECONOMIC CONDITIONS IN SEPTEMBER

The Canadian economy has continued to maintain a high level of activity accompanied by sharply rising prices. Industrial production in July and August receded slightly from the level attained during the early summer but despite this, total employment has remained high and unemployment has continued to decline. Production levels during the summer months have been affected by the extremely hot weather and by the partial closing of plants during vacations. British Columbia has been one exception in this picture, where the employment, consumption of electric power and retail sales have all shown more strength than Canada's as a whole.

The upward movement in price level has been accompanied by rising incomes and rising levels of money expenditure. Total labour income showed a further advance in July as it passed the 500 million level. rise in prices may tend to choke off some forms of expenditures and cause others to be delayed until the price situation is more favourable. But overall expenditure forces are still strong and while this situation continues there is less likelihood of any sharp decline in either employment or prices. A high level of capital expenditure is one of the major sustaining forces in the present economy. Coupled with this has been a favourable export market, a demand for goods to build inventories and a strong market for the more durable consumer goods such as automobiles. Only in the nondurable goods is there any evidence of weakness. Retail sales in these lines have no more than kept pace with price rises and in some instances volume has fallen off slightly. With a growing scarcity of hard currency in many countries, the export market may deteriorate somewhat and this could have a dampening effect on business activity.

A further substantial step towards the decontrol of prices was taken on September 15 as the government suspended ceilings on a wide range of products. The principal commodities retained under control are sugar, meats, wheat, coarse grains, the principal oils and fats, certain dried fruits and iron and steel and tin in primary At the same time subsidies forms. have been withdrawn on all decon-The most important trolled items. of these is the domestic subsidy on flour and the import subsidies on cotton, hides and skins and on corn and soya beans. Most of the supply and distribution control orders relating to commodities released from ceilings have been discontinued. Rental ceilings and eviction controls remain unchanged but sugar rationing has ended. Though ceilings have been removed from a large segment of the economy the Wartime Prices and Trade Board still retains power to reimpose price ceilings where it feels unreasonable increases have occurred.

These steps will cause some continuation of the sharp upward trend in prices that has occurred during recent months. During August the cost-of-living index registered the largest monthly gain since May, 1920, and on September 2 the index stood at 139.4 on a base of 1935–39 = 100. Sharp increases in clothing and food prices accounted for most of this gain. Price increases of recent months have somewhat narrowed the difference between Canadian and American price levels which developed during the latter part of 1946, but in July the American cost-of-living index was still 22 points higher than the Canadian index.

The index of industrial production fell off again in August for the second consecutive month. Declines were recorded in all the main components, mining, manufacturing and electric

Unseasonably hot weather power. coupled with a reduction in the work month caused by the occurrence of 5 Sundays may have accounted for at least part of the August decline. The drop in electric power output was apparently related to the falling off in water levels following an extremely dry summer. Though manufacturing production was about 2 per cent lower than July after seasonal adjustment this reflected mixed trends in different industries. Rubber products, leather footwear and textile products were all down slightly but in contrast lumber products and pulp and paper showed small gains. Production of motor vehicles fell off sharply but other iron and steel products continued at about the same level. Output of electrical apparatus and refined metals both showed decline.

Steel production in August was only slightly higher than in July. In contrast pig iron production reached the highest monthly total since last January. Steel ingot output, at 226,000 tons, was substantially below the monthly average required to reach a 3 million ton year. An average production of about 300,000 tons for the four remaining months of 1947 would be required to reach the original goal.

With a larger supply available Canada's rubber industry is now using an increasing proportion of natural rubber. In July 54 per cent of the new rubber used by manufacturers was of the natural type, whereas it made up only 40 per cent at the beginning of the year and only 20 per cent in the first half of 1946. A consequence of this has been some decline in the consumption of synthetic rubber.

In the leather footwear field production fell off sharply in July and output for the month was the lowest for any similar period since the beginning of 1941. Stocks of footwear in the hands of wholesalers have been mounting rapidly since the first of the year and at the end of July they were 46 per cent greater than a year earlier. In contrast wholesale sales for the first seven months of the year

have averaged only 7 per cent more than in 1946.

In most commodities the supply of construction materials has improved substantially during the past year. A comparison of the second quarter of 1947 with the same period in 1946 shows that total cement output is about 7 per cent greater, production of concrete brick is almost 60 per cent higher and an increase of 19 per cent was shown in the output of concrete blocks. Production of clay bricks and structural tile have both increased almost 10 per cent. Other building materials which have shown increase over the same quarter a year ago are rigid insulating board (33 per cent), value of paint sales (30 per cent), imports of glass (12 per cent), asphalt products (5 to 10 per cent), and wire nails about 4 per cent. Shipments of primary iron and steel are also greater and the building construction industry has been receiving about 12 per cent of the steel industry's total shipments.

The lagging trend in Eastern Canada's lumber production was reversed during July and total output for Ontario and Quebec exceeded July, 1946, by about 17 per cent. Output in British Columbia is at about the same level as a year ago though total production for the year to date is about 28 per cent more than in the same period in 1946. This gain is almost entirely the result of the loss in production which occurred during the woodworkers' strike in May and June of 1946. For Canada as a whole production in July was about 6 per cent greater than in the same month a

year ago. The rac

The radio industry has been one of the first to reach a position of adequate supply. Producers' inventories at the end of July had reached roughly 129,000 sets, over one-fourth of the pre-war peak year's annual output. Production has exceeded 90,000 in a number of recent months and has averaged over 80,000 sets per month since the first of the year, an annual rate of almost a million sets. Exports in July showed a sharp gain and the 14,310 sets shipped in that month

e h were almost equal to the total exported However, imports for during 1946. the year to date have been larger Though than the number exported. the overall supply of radios is large, there is still a shortage of the more expensive console type models.

In the face of an extremely high level of demand employment has expanded steadily throughout the summer months. Though the expansion has been widespread the largest increases have centred in the mining, communications and construction industries. Employment in metallic ore mines moved up substantially in the first part of the year and is now at the highest level since 1942. Since the war's end the growth of employment in the telephone industry has been especially pronounced and it is now 50 per cent higher than in August, 1945. Construction employment also has continued to expand and it is now almost 20 per cent above its level a year ago. In the manufacturing group while total employment has increased about 10 per cent during the past year, some sub-groups have shown much larger gains. In the lead are electrical apparatus increased 19 per cent, agricultural implements 18 per cent and rough and dressed lumber 17.5 per cent. In the face of this heavy demand for labour, unemployment has reached a post-war low point. At the end of August there were only 37,000 ordinary claimants on the unemployment insurance register in comparison with 62,000 a year ago.

Retail sales in August were only about 3 per cent greater than in July, a somewhat smaller gain than usual for this time of the year. gain in real terms was even smaller for prices were rising throughout this Clothing prices for instance advanced over 6 per cent during July and August, and food prices rose over 3 per cent. In comparison with August, 1946, sales in three trades, women's clothing, hardware, and jewellery stores showed a decline.

Data for notice deposits in the

Canadian chartered banks indicate that the current volume of personal savings is substantially lower than it was in 1946. For the period from January to August the increase in notice deposits has been \$305 million, scarcely over half of the advance of \$601 million which occurred for the same period in 1946. Accompanying this decline have been marked changes in the various forms of expenditures that create a demand for savings. Business and private expenditures on capital goods are expected to be about 50 per cent higher than they were during 1946. But not all of the increase has called for augmented savings in this country. A substantial part has been met by increased imports of machinery, agricultural implements and other capital goods from the United States.

There has also been a marked change in the position of the Dominion government. In contrast with the calendar year 1946 when the government's expenditures were in excess of their tax receipts, a substantial surplus is being accumulated during the present year. For the six-month period April to September total receipts have exceeded expenditures by over \$480 million. Thus the Dominion government has shifted over from a position in which it had a substantial demand for savings to one where it is accumulating savings itself. But the government's United Kingdom and foreign loan programme must also be con-Goods shipped under these sidered. loans are being financed by the government and this has created an additional demand for savings, at least part of which can be met out of the government's own surplus.

In overall terms the commodity trade balance has declined somewhat during 1946. For the first eight months of the year this balance (after deducting the non-commercial item returned Canadian goods) has fallen from \$372 million in 1946 to \$126 million in 1947. This trend also indicates a reduced demand for savings.

STATISTICIEN DU DOMINION: HERBERT MARSHALL CHEF, BRANCHE DES STATISTIQUES ÉCONOMIQUES: STONEY B. SMITH

SITUATION ÉCONOMIQUE EN SEPTEMBRE

L'économie canadienne demeure très active tandis que les prix augmentent rapidement. La production industrielle en juillet et août décline quelque peu par rapport au début de l'été. mais l'embauchage se maintient à un niveau élevé et le chômage de continuer à décliner. Les niveaux de la production durant l'été se ressentent de la chaleur extrême et de la fermeture partielle des établissements au cours des vacances, sauf en Colombie-Britannique, où l'emploi, la consommation d'énergie électrique et les ventes de détail sont plus élevés qu'au Canada

en général.

L'ascension des prix est accompagnée d'une augmentation des revenus et des dépenses monétaires. Le revenu total de la main-d'œuvre augmente de nouveau en juillet alors qu'il dépasse les 500 millions de dollars. La hausse des prix aura peut-être pour effet de décourager certaines formes de dépense et d'en retarder d'autres jusqu'à ce que la situation soit plus favorable. dépenses générales restent cependant élevées et tant que cette situation durera, tout déclin brusque de l'emploi ou des prix est peu probable. niveau élevé des dépenses d'immobilisation est l'une des grandes forces de l'économie actuelle, auxquelles il faut ajouter un marché étranger favorable, une demande de marchandises en vue d'accumuler des stocks et un marché ferme pour les marchandises durables de consommation telles que les automobiles. Seules les denrées non durables manifestent quelque faiblesse. Les ventes de détail de ces marchandises tiennent tout au plus le pas avec la hausse des prix; dans certains cas, elles déclinent quelque peu. En raison de la pénurie grandissante de numéraire dans plusieurs pays, le marché d'exportation perdra peut-être un peu de sa valeur, ce qui pourrait amortir l'activité commerciale.

Au 15 septembre, le gouvernement fait un nouveau pas important dans le domaine de la dérèglementation des prix

en abolissant le prix maximum d'un grand nombre de produits. Les principales denrées qui restent soumises à la régie sont le sucre, la viande, le blé, les grains fourragers, les huiles et les graisses principales, certains fruits séchés et les formes primaires du fer, de l'acier et de l'étain. En même temps. les subventions sont retirées de toutes les marchandises dérèglementées. Les plus importantes de ces dernières sont la subvention domestique sur la farine et les subventions d'importation sur le coton, les peaux et les cuirs, le maïs et le soya. La plus grande partie des ordonnances de règlementation des approvisionnements et de la distribution quant aux denrées libérées du plafonnement sont révoquées. règlementation des loyers et des évictions reste la même mais le rationnement du sucre est terminé. que le plafonnement ait été retiré d'une grande partie de l'économie, la Commission des prix et du commerce en temps de guerre conserve l'autorité de réimposer les prix-plafond s'il se produit des augmentations exorbitantes.

Ces mesures vont stimuler pour quelque temps encore la forte tendance à la hausse des prix qui se fait sentir depuis quelques mois. En août, l'indice du coût de la vie enregistre le gain mensuel le plus considérable depuis mai 1920 et s'établit, le 2 septembre, à 139.4, sur la base de 100 en 1935-1939. La majeure partie de ce gain est expliquée par l'augmentation rapide du prix des vêtements et des produits alimentaires. Le renchérissement ces derniers mois rétrécit jusqu'à un certain point l'écart entre les niveaux de prix canadiens et américains qui se sont établis durant la dernière partie de 1946. Toutefois, en juillet, l'indice du coût de la vie aux Etats-Unis est encore de 22 points supérieur à l'indice canadien.

L'indice de la production industrielle décline de nouveau en août pour le deuxième mois consécutif. Tous les

principaux composants diminuent, soit les mines, les manufactures et l'énergie électrique. La chaleur hors de saison, accompagnée d'un fléchissement du travail durant le mois à cause des cinq dimanches, explique au moins une partie de la diminution en août. Le déclin de la production d'énergie électrique découle apparemment de la baisse du niveau de l'eau à la suite de l'été excessivement chaud. La production manufacturière, après ajustement saisonnier, est d'environ 2 p. 100 plus basse que celle de juillet et les différentes industries affichent une diversité de tendances. Les articles en caoutchouc, les chaussures en cuir et les produits textiles diminuent tous légèrement. Par contre, les produits du bois, le papier et la pulpe augmentent quelque peu. La production de véhicules automobiles diminue sensiblement mais les autres produits du fer et de l'acier demeurent à peu près au même niveau. La production d'appareils électriques et de métaux affinés décline.

La production d'acier en août n'est que légèrement plus forte qu'en juillet, Par contre, celle de fonte en gueuses atteint le total mensuel le plus élevé depuis janvier dernier. La production de lingots d'acier, de 226 mille tonnes, est sensiblement inférieure à la moyenne mensuelle requise pour atteindre 3 millions de tonnes durant l'année. En vue d'atteindre l'objectif initial, il faudrait une production moyenne d'environ 300,000 tonnes durant les quatre derniers mois de

1947.

Grâce à des approvisionnements disponibles plus considérables, l'industrie canadienne du caoutchouc utilise maintenant une plus forte proportion de caoutchouc naturel. En juillet, 54 p. 100 du caoutchouc neuf utilisé par les fabricants est du caoutchouc naturel au regard de 40 p. 100 au début de l'année et de 20 p. 100 seulement durant le premier semestre de 1946. Il en résulte une diminution de la consommation de caoutchouc synthétique.

Dans le domaine des chaussures en cuir, la production décline brusquement en juillet et, durant le mois, touche son niveau le plus bas de toute période correspondante depuis le début de 1941. Les stocks de chaussures entre les mains des grossistes augmentent rapidement depuis le début de l'année et à la fin de juillet, ils sont de 46 p. 100 plus élevés qu'il y a un an. Par ailleurs, les ventes de gros durant les sept premiers mois de la présente année n'atteignent en moyenne que 7 p. 100 de plus qu'en 1946.

Sous presque toutes les formes, les stocks de matériaux de construction augmentent sensiblement durant l'année écoulée. Une comparaison du deuxième trimestre de 1947 avec la période correspondante de 1946 révèle que la production globale de ciment est d'environ 7 p. 100 plus élevée, celle de briques en béton, d'environ 60 p. 100, et celle de blocs en béton, de 19 p. 100. La production de briques d'argile et de tuiles de charpente augmente de presque 10 p. 100. Les autres matériaux de construction qui enregistrent une augmentation par rapport au même trimestre l'an dernier sont les suivants: planches isolantes rigides, 33 p. 100; valeur des ventes de peinture, 30 p. 100; importations de vitre, 12 p. 100; produits de l'asphalte, 5 à 10 p. 100; clous de Paris, environ 4 p. 100. Les expéditions de fer et d'acier primaires sont aussi plus élevées; l'industrie de la construction de maisons recoit environ 12 p. 100 des expéditions totales des aciéries.

La tendance déclinante de la production de bois d'œuvre dans l'est canadien est inverse en juillet et la production globale de l'Ontario et du Québec dépasse de près de 17 p. 100 celle de 1946. La production iuillet Colombie-Britannique occupe environ le même niveau qu'il y a un an, bien que la production totale de l'année jusqu'à ce jour soit d'environ 28 p. 100 supérieure à celle de la même période de 1946. Cette augmentation découle presque totalement de la perte de production qui a résulté de la grève des travailleurs du bois en mai et en juin 1946. La production de tout le Canada en juillet atteint environ 6 p. 100 de plus que durant le même mois il y a un an.

L'industrie de la radio est une des premières à accuser des approvisionnement suffisants. Les inventaires des producteurs à la fin de juillet touchent à peu près 129,000 unités, soit un quart de plus que la production de l'année cime d'avant la guerre. Cette production dépasse 90,000 unités ces récents mois et atteint en moyenne plus de 80,000 unités par mois depuis le début de l'année, soit un taux annuel de près d'un million. Les exportations en juillet augmentent brusquement et les 14.310 appareils expédiés durant ce mois atteignent presque le total exporté en 1946. Cependant, les importations durant l'année jusqu'à ce jour sont plus fortes que les exportations. Bien que les stocks généraux de radios soient élevés, il existe encore une pénurie d'appareils dispendieux sur pieds.

En présence d'une demande extrêmement élevée, l'emploi augmente régulièrement au cours des mois d'été. Bien que l'augmentation soit générale, les plus gros gains sont centralisés dans les mines, les communications et la construction. L'emploi dans les mines de minerai métallique progresse sensiblement durant la première partie de l'année et s'établit maintenant à son plus haut niveau depuis 1942. Depuis la fin de l'année, l'expansion de l'emploi dans l'industrie du téléphone est particulièrement marquée; il est maintenant de 50 p. 100 de plus qu'en août 1945. L'emploi dans la construction continue aussi d'augmenter et s'établit maintenant à près de 20 p. 100 au-dessus du niveau d'il v a un an. Quant au groupe manufacturier, tandis que l'emploi total augmente d'environ 10 p. 100 durant cette année, certains sousgroupes enregistrent des gains beau-coup plus prononcés. Sont en tête les appareils électriques, avec un gain de 19 p. 100; les instruments aratoires, 18 p. 100; le bois en grume et le bois dégrossi, 17.5 p. 100. En présence de cette forte demande de main-d'œuvre le chômage atteint un bas niveau durant l'après-guerre. A la fin d'août, il n'y a que 37,000 postulants ordinaires inscrits sur les registres d'assurancechômage, en comparaison de 62,000 il y a un an.

Il y a aussi changement manifeste quant à la position du gouvernement du Dominion. Par opposition à l'année civile de 1946, alors que les dépenses du gouvernement ont dépassé les recettes des impôts, un excédent considérable est en voie de s'accumuler cette année. Durant la période de six mois, avrilseptembre, les recettes globales excèdent les dépenses de plus de 480 millions de dollars. Ainsi, le gouvernement du Dominion passe d'une position où il lui fallait des épargnes considérables à une autre où il accumule lui-même des épargnes. Cependant, il faut aussi tenir compte du programme de prêts au Royaume-Uni et à l'étranger. Les marchandises expédiées en vertu de ces prêts, que le gouvernement est en mesure de financer au moins partiellement à même son excédent, sont financées par le gouvernement, ce qui crée un besoin supplémentaire d'épargnes.

Généralement, la balance du commerce de denrées décline quelque peu en 1946. Durant les huit premiers mois de l'année, cette balance (déduction faite des articles non commerciaux revenus au pays à titre de marchandises canadiennes) diminue de 372 millions de dollars en 1946 à 126 millions en 1947. Cette tendance indique de même que la nécessité d'épargner diminue.

En résumé, le tableau général est le suivant: les besoins réunis d'épargnes en vue de financer le gouvernement du Dominion et le programme de placements nets à l'étranger seront beaucoup moindres sinon inexistants en 1947. Ce déclin est contre-balancé par la hausse des dépenses au compte capital, de sorte que le résultat net prendra peut-être la forme d'un besoin total d'épargnes équivalent à celui de l'an dernier. En présence du déclin des épargnes personnelles, cet état de choses accentue la pression exercée sur le niveau des prix. Les deux éléments principaux qui aident à soulager cette pression sont l'excédent courant du gouvernement du Dominion et la rentrée considérable de marchandises provenant des Etats-Unis.
